

Film Tourism in Greece: Survey Analysis

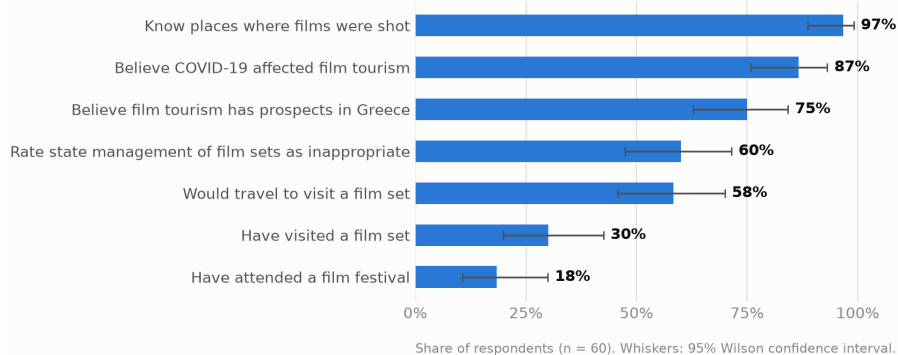

University of West Attica, Dept. of Tourism Management | Case Studies in Tourism, 2022-23 | n = 60 respondents | Python (pandas, SciPy, matplotlib)

Question: is there demand for film-location tourism in Greece, and do students differ from other respondents? Re-analysis of an original 60-response questionnaire, rebuilt reproducibly with confidence intervals and corrected tests.

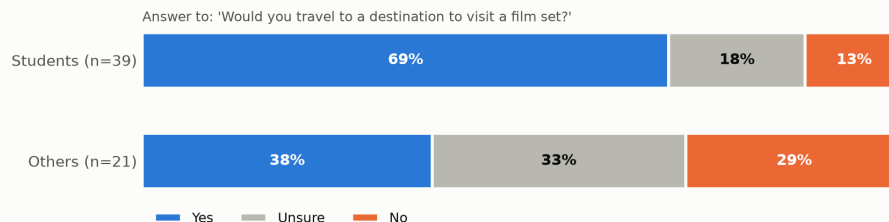

Key findings

- **High awareness, low experience.** 97% know places where films were shot, but only 30% (95% CI 20-43%) have visited a film set.
- **Latent demand.** 58% (CI 46-70%) say they would travel to visit a film set; 18% say no. Motivation is spread across the 1-10 scale (median 5).
- **Perceived governance gap.** 60% (CI 47-71%) rate the state's management of film sets as inappropriate, while 75% see prospects for film tourism.
- **Students are more willing to travel** than other respondents (69% vs 38%; OR = 3.66 (95% CI 1.18-10.37); Fisher p = 0.028) **but the result does not survive correction** for the 7 tests run (Holm-adjusted p = 0.19). It is a hypothesis for a larger study, not an established effect.

Most respondents know film locations; far fewer have visited one

Students are more likely to say they would travel to a film set

Hypothesis tests (pre-specified, Holm-corrected)

Comparison	Test	Effect	p	p (Holm)
Would travel to a film set (yes vs not yes): students vs others	Fisher exact	OR = 3.66 (95% CI 1.18-10.37)	0.028	0.19
Motivation score (1-10): students vs others	Mann-Whitney U	rank-biserial r = +0.10; medians 5.0 vs 5.0	0.521	1.00
Motivation score (1-10): has visited a film set vs not	Mann-Whitney U	rank-biserial r = +0.19; medians 5.5 vs 4.5	0.234	0.74
Would travel (yes vs not yes): has visited a film set vs not	Fisher exact	OR = 3.50 (95% CI 0.96-10.86)	0.052	0.26
Films watched per year (ordinal) vs motivation score	Spearman	rho = +0.28	0.028	0.19
Motivation score (1-10): women vs men (1 'other' excluded)	Mann-Whitney U	rank-biserial r = +0.21; medians 5.0 vs 4.0	0.185	0.74
State management rated inappropriate: students vs others	Fisher exact	OR = 0.88 (95% CI 0.31-2.60)	1.000	1.00

Method and limitations

Method. Data cleaned with a documented log (Excel-corrupted date cells repaired, labels harmonised, mismatched headers fixed); 21 of 24 figures in the original paper reproduced exactly (the rest differ by one respondent). Wilson 95% intervals for proportions; Fisher exact, Mann-Whitney U and Spearman tests; Holm correction. **Limitations.** Convenience sample (65% students, only 3 professionals), stated intentions rather than behaviour, low power for subgroup tests.
